The Original Multi-Tasker

All the benefits of a conventional access sheath — plus procedural versatility.

- Smooth, atraumatic insertion, gentle dilation and continuous ureteral access.
- Multi-tasking capability; additional irrigation to enhance visibility; irrigation/aspiration for stone debris removal; and extra working channel for insertion/protection of other instruments.

For additional information contact your local Bard representative or call 1.800.526.4455.

Effective Access, Plus Procedural Versatility

Now you can have all the benefits of a conventional access sheath—plus an entirely new level of procedural versatility. Only the AquaGuide™ sheath is designed with a dual lumen, providing you with a valuable second working channel for a variety of procedural steps such as irrigation, aspiration and injection of contrast media. It’s the original multi-tasker.

**Proprietary Dual-Lumen Design for Exceptional Versatility**

- Dual Lumen design reduces procedural steps and inventory requirements
- Dual Lumen design performs multiple functions in addition to maintaining access: acts as a pathway for continuous irrigation/aspiration and provides a secondary port for instruments including safety guidewires
- Unique geometric shape aids in kink resistance

**Smooth Insertion and Gentle Dilation**

- Tapered tip assures gentle, atraumatic insertion and dilation
- Hydrophilic coating on inside and outside of sheath and on outside of dilator promotes smooth navigation and instrument tracking
- Ergonomic, rubberized handle for comfort and control

**Irrigation/Aspiration for Simplified Stone Debris Removal**

- Laser procedures can produce multiple stone fragments.
- AquaGuide™ sheath provides a second lumen for additional irrigation.
- Result is a simplified method for flushing out stone fragments.

**Enhanced Flow for Improved Visibility**

- Conventional irrigation can result in poor visibility.
- AquaGuide™ sheath provides up to 98ml/min of additional flow through second lumen.
- Result is enhanced visibility for improved control.

**An Instrumentation Channel for Added Flexibility**

- Safety guidewires are typically placed outside the ureteroscope.
- AquaGuide™ sheath provides a second lumen for passage.
- Result is a protected ureter.
